Master’s in Civil Engineering
The department offers a master’s degree in Civil Engineering on both the Lincoln and Omaha campuses. Specializations for the M.S. in Civil Engineering include: environmental engineering, geotechnical and materials engineering, structural engineering, transportation engineering, and water resources engineering.

Master’s in Civil Engineering and Community and Regional Planning
Professionals educated both in civil engineering and in planning are uniquely equipped to understand the increasing complexity of issues relating to physical, economic, and social well-being in the world. This dual master’s degree is offered in collaboration with the UNL College of Architecture.

Master’s in Environmental Engineering
Environmental Engineers focus on developing innovative solutions to complex problems involving physical, chemical, biological and ecological components. This degree is jointly administered with Biological Systems Engineering.

Ph.D. in Civil Engineering
Doctoral study is intended for students seeking in-depth knowledge in an area of civil engineering beyond that resulting from an M.S. degree, and who wish to pursue faculty positions or other research positions in industry or governmental institutions.
